Editorial Review

About the Author

"Terry and Gerry Audesirk" grew up in New Jersey, where they met as undergraduates. After marrying in 1970, they moved to California, where Terry earned her doctorate in marine ecology at the University of Southern California and Gerry earned his doctorate in neurobiology at the California Institute of Technology. As postdoctoral students at the University of Washington's marine laboratories, they worked together on the neural bases of behavior, using a marine mollusk as a model system. Terry and Gerry are now professors of biology at the University of Colorado at Denver, where they have taught introductory biology and neurobiology since 1982. In their research lab, funded by the National Institutes of Health, they investigate the mechanisms by which neurons are harmed by low levels of environmental pollutants. Terry and Gerry share a deep appreciation of nature and of the outdoors. They enjoy hiking in the Rockies, running near their home in the foothills west of Denver, and attempting to garden at 7000 feet in the presence of hungry deer and elk. They are long-time members of many conservation organizations. Their daughter, Heather, has added another focus to their lives. "Bruce E. Byers," a midwesterner transplanted to the hills of western Massachusetts, is a professor in the biology department at the University of Massachusetts, Amherst. He's been a member of the faculty at UMass (where he also completed his doctoral degree) since 1993. Bruce teaches introductory biology courses for both nonmajors and majors; he also teaches courses in ornithology and animal behavior. A lifelong fascination with birds ultimately led Bruce to scientific exploration of avian biology. His current research focuses on the behavioral ecology of birds, especially on the function and evolution of the vocal signals that birds use to communicate. The pursuit of vocalizations often takes Bruce outdoors, where he can be found before dawn, tape recorder in hand, awaiting the first songs of a new day.

CLIFTON E. MELOAN, phd, is Professor Emeritus of Analytical Chemistry at Kansas State University, Manhattan, Kansas. Extensively published in the field, Dr. Meloan has served as a science advisor to the FDA for nearly 30 years.

Users Review

From reader reviews:

Lula Estes:

Book is actually written, printed, or highlighted for everything. You can learn everything you want by a reserve. Book has a different type. To be sure that book is important issue to bring us around the world. Alongside that you can your reading expertise was fluently. A book Lab Manual - Criminalistics: An Introduction To Forensic Science will make you to always be smarter. You can feel more confidence if you can know about almost everything. But some of you think in which open or reading a book make you bored. It is not make you fun. Why they can be thought like that? Have you trying to find best book or suitable book with you?

Betty Williams:

Nowadays reading books become more than want or need but also work as a life style. This reading habit give you lot of advantages. The benefits you got of course the knowledge the rest of the information inside

the book in which improve your knowledge and information. The data you get based on what kind of e-book you read, if you want send more knowledge just go with knowledge books but if you want really feel happy read one along with theme for entertaining including comic or novel. The particular Lab Manual - Criminalistics: An Introduction To Forensic Science is kind of e-book which is giving the reader unpredictable experience.

Raymond Crandall:

Reading a reserve can be one of a lot of pastime that everyone in the world really likes. Do you like reading book thus. There are a lot of reasons why people enjoyed. First reading a publication will give you a lot of new details. When you read a reserve you will get new information due to the fact book is one of numerous ways to share the information or perhaps their idea.
