Editorial Review

Review

“This clever, well-illustrated romp doesn't mince words, but gives students the straight truth about even the most unpleasant functions of the human body. The colorful cartoons . . . do help get the key concepts across. The book is divided into sections based on systems, so kids could skip to just what they are interested in or browse through the whole book. This is a fun introduction to how the human body works.” *?School Library Journal*

“The appeal of this book is that it can be read straight through or read out of order, section by section. It is easy to follow and understand and presents information aimed at the middle grade kids who are being introduced to the body and its functions. This is a fun one and reveals the body processes in more like an action film than a science text.” *?SimplyScience Blog (Books and easy science lessons)*

“The uninhibited and humorous style will attract this age group and reluctant readers. Presented in first person, the text makes its points with jokes and wordplay, but it also provides lots of information. Some amazing statistics show up at the bottom of each page. . . . This book would make good supplemental material in science or health classes, especially for those students who think that science is boring. Recommended” *?Library Media Connection*

“Young readers ages ten and up can learn fascinating facts about the human body in this well crafted new book in the Basher popular science series. . . . Readers will come away with a better understanding of the fundamental components of their bodies. . . . [A] powerful little book.” *?Tusconcitizen.com*

“The personification of body parts is right in line with Basher's usual approach, and the implements they are given are cleverly reflective of their real functions, making the [book] both informative and fun to look at. . . . Dan Green's text has the body bits narrating their own stories, which further humanizes them. . . . It is quite easy to imagine very young children becoming entranced by the Basher approach . . . get 'em while they're young and keep 'em interested as they get older.” *?Infodad.com*

“Supplemental science reading doesn't come much more fun.” *?Booklist*

About the Author

Simon Basher is the creator and illustrator of more than ten best-selling concept books for children including The Periodic Table, Physics, Biology, Astronomy, Math, and Punctuation. Based in London and Tokyo and specializing in "graphic surrealism", Basher's original artwork is regularly exhibited and sold in the UK, Europe, the US and the Asia. Find out more at www.basherworld.com.

Dan Green studied Natural Sciences at Cambridge University. Since graduating, he has written and edited many popular science titles and humorous books, become the editor of a South American national newspaper, worked as a travel writer, as well as developing and editing the wildly successful Horrible Science magazine collection. He is the "voice" of Basher's bestselling science-made-easy books, and to date has written nine titles in the series.

Users Review
