Descriptive Data Mining (Computational Risk Management) By David L. Olson

This book offers an overview of knowledge management. It starts with an introduction to the subject, placing descriptive models in the context of the overall field as well as within the more specific field of data mining analysis. Chapter 2 covers data visualization, including directions for accessing R open source software (described through Rattle). Both R and Rattle are free to students. Chapter 3 then describes market basket analysis, comparing it with more advanced models, and addresses the concept of lift. Subsequently, Chapter 4 describes smarketing RFM models and compares it with more advanced predictive models. Next, Chapter 5 describes association rules, including the APriori algorithm and provides software support from R. Chapter 6 covers cluster analysis, including software support from R (Rattle), KNIME, and WEKA, all of which are open source. Chapter 7 goes on to describe link analysis, social network metrics, and open source NodeXL software, and demonstrates link analysis application using PolyAnalyst output. Chapter 8 concludes the monograph.

Using business-related data to demonstrate models, this descriptive book explains how methods work with some citations, but without detailed references. The data sets and software selected are widely available and can easily be accessed.

Editorial Review

From the Back Cover

This book offers an overview of knowledge management. It starts with an introduction to the subject, placing descriptive models in the context of the overall field as well as within the more specific field of data mining analysis. Chapter 2 covers data visualization, including directions for accessing R open source software (described through Rattle). Both R and Rattle are free to students. Chapter 3 then describes market basket analysis, comparing it with more advanced models, and addresses the concept of lift. Subsequently, Chapter 4 describes smarketing RFM models and compares it with more advanced predictive models. Next, Chapter 5 describes association rules, including the APriori algorithm and provides software support from R. Chapter 6 covers cluster analysis, including software support from R (Rattle), KNIME, and WEKA, all of which are open source. Chapter 7 goes on to describe link analysis, social network metrics, and open source NodeXL software, and demonstrates link analysis application using PolyAnalyst output. Chapter 8 concludes the monograph.

Using business-related data to demonstrate models, this descriptive book explains how methods work with some citations, but without detailed references. The data sets and software selected are widely available and can easily be accessed.

About the Author

David L. Olson is the James & H.K. Stuart Professor in MIS and Chancellor's Professor at the University of Nebraska. He has published over 200 articles in refereed journals, primarily on the topic of multiple objective decision-making and information technology. He has authored over 20 books, is co-editor-in-chief of the International Journal of Services Sciences and associate editor of a number of journals. He has given over 150 presentations at international and national conferences. He is a member of the Decision Sciences Institute, the Institute for Operations Research and Management Sciences, and the Multiple Criteria Decision Making Society. He was a Lowry Mays endowed Professor at Texas A&M University from 1999 to 2001, was named the Raymond E. Miles Distinguished Scholar in 2002, and was James C. and Rhonda Seacrest Fellow from 2005 to 2006. He was named Best Enterprise Information Systems Educator by IFIP in 2006. He is a Fellow of the Decision Sciences Institute.

Users Review

From reader reviews:

Madeline Williams:

What do you about book? It is not important with you? Or just adding material when you require something to explain what your own problem? How about your free time? Or are you busy man? If you don't have spare time to accomplish others business, it is gives you the sense of being bored faster. And you have spare time? What did you do? Every person has many questions above. They must answer that question mainly because just their can do this. It said that about publication. Book is familiar on every person. Yes, it is appropriate. Because start from on jardín de infancia until university need this Descriptive Data Mining (Computational Risk Management) to read.

Rose Rowe:

Hey guys, do you want to find a new book to read? Maybe the book with the headline Descriptive Data Mining (Computational Risk Management) suitable to you? The book was written by well-known writer in this era. The book entitled Descriptive Data Mining (Computational Risk Management) is one of several books that everyone reads now. This kind of book was inspired a lot of people in the world. When you read this publication you will enter the new age that you ever knew just before. The author explained their concept in the simple way, therefore all of people can easily to recognise the core of this guide. This book will give you a large amount of information about this world now. So you can see the represented of the world with this book.

Terrie Delgadillo:

Descriptive Data Mining (Computational Risk Management) can be one of your beginner books that are good idea. All of us recommend that straight away because this e-book has good vocabulary that will increase your knowledge in words, easy to understand, bit entertaining but delivering the information. The article writer giving his/her effort to place every word into satisfaction arrangement in writing Descriptive Data Mining (Computational Risk Management) however doesn't forget the main level, giving the reader the hottest and also based confirm resource facts that maybe you can be one among it. This great information can draw you into new stage of crucial thinking.

Oscar Jackson:

Reading a book to become new life style in this 12 months; every people loves to examine a book. When you study a book you can get a lot of benefit. When you read ebooks, you can improve your knowledge, due to the fact book has a lot of information onto it. The information that you will get depend on what types of book that you have read. If you wish to get information about your analysis, you can read education books, but if you act like you want to entertain yourself read a fiction books, these are novel, comics, and soon. The Descriptive Data Mining (Computational Risk Management) will give you a new experience in reading through a book.
