Death by Black Hole: And Other Cosmic Quandaries By Neil deGrasse Tyson

“[Tyson] tackles a great range of subjects . . . with great humor, humility, and?most important? humanity.” ?*Entertainment Weekly*

Loyal readers of the monthly "Universe" essays in *Natural History* magazine have long recognized Neil deGrasse Tyson's talent for guiding them through the mysteries of the cosmos with clarity and enthusiasm. Bringing together more than forty of Tyson's favorite essays, *?Death by Black Hole?* explores a myriad of cosmic topics, from what it would be like to be inside a black hole to the movie industry's feeble efforts to get its night skies right. One of America's best-known astrophysicists, Tyson is a natural teacher who simplifies the complexities of astrophysics while sharing his infectious fascination for our universe.

Editorial Review

From Publishers Weekly

What would it feel like if your spaceship were to venture too close to the black hole lurking at the center of the Milky Way? According to astrophysicist Tyson, director of New York City's Hayden Planetarium, size does matter when it comes to black holes, although the chances of your surviving the encounter aren't good in any case. Tyson takes readers on an exciting journey from Earth's hot springs, where extremophiles flourish in hellish conditions, to the frozen, desolate stretches of the Oort Cloud and the universe's farthest reaches, in both space and time. Tyson doesn't restrict his musings to astrophysics, but wanders into related fields like relativity and particle physics, which he explains just as clearly as he does Lagrangian points, where we someday may park interplanetary filling stations. He tackles popular myths (is the sun yellow?) and takes movie directors—most notably James Cameron—to task for spectacular goofs. In the last section the author gives his take on the hot subject of intelligent design. Readers of *Natural History* magazine will be familiar with many of the 42 essays collected here, while newcomers will profit from Tyson's witty and entertaining description of being pulled apart atom by atom into a black hole, and other, closer-to-earth, and cheerier, topics. 9 illus. Whenever astronomy intrudes on the news, interviewers flock to the telegenic Tyson for an explanation. The high-profile astrophysicist is also an essayist for *Natural History*, the American Museum of Natural History's monthly that is the source for this volume. His pieces are organized under whimsical banners such as "All the ways the cosmos wants to kill us," and Tyson's style will connect with general readers who are interested in the form the apocalypse will take. Scientists know that in a few billion years, an expanding sun will vaporize the earth, provided it's not been previously destroyed by a rogue black hole. Besides regaling spooky stories, the selections deploy movies as an astronomy popularizer, with Tyson critiquing the accuracy of the sky depicted in various scenes. Elsewhere, topics in the history of astronomy and physics fall into two categories: essays about the discovery of physical laws, and about cosmic objects such as galactic gas clouds and quasars. Whatever readers' scientific tastes, something in Tyson's wide-ranging collection will sate them. *Gilbert Taylor*

Review

"Characteristically fun and jaunty." (Sky and Telescope)

"Dr. Tyson has a grand time dissecting certain forms of foolishness. Get it, plan to savor it" (Angela Gunn - USA Today.com)

"Tyson comes across as having an excellent grasp of the current state of astrophysics, cosmology, chemistry and other scientific disciplines... he conveys knowledge clearly to the nonspecialist, often with ingratiating humor and wit." (Roy E. Perry - The Tennessean)

From reader reviews:

Waldo Gates:

Nowadays reading books become more than want or need but also become a life style. This reading habit give you lot of advantages. The advantages you got of course the knowledge even the information inside the book this improve your knowledge and information. The details you get based on what kind of reserve you read, if you want attract knowledge just go with education books but if you want sense happy read one with theme for entertaining like comic or novel. The actual Death by Black Hole: And Other Cosmic Quandaries is kind of guide which is giving the reader erratic experience.

Margaret Bonner:

The e-book untitled Death by Black Hole: And Other Cosmic Quandaries is the reserve that recommended to you to see. You can see the quality of the book content that will be shown to a person. The language that publisher use to explained their ideas are easily to understand. The copy writer was did a lot of analysis when write the book, therefore the information that they share to you is absolutely accurate. You also can get the e-book of Death by Black Hole: And Other Cosmic Quandaries from the publisher to make you much more enjoy free time.

Arielle Griffin:

Don't be worry in case you are afraid that this book will filled the space in your house, you may have it in e-book method, more simple and reachable. This specific Death by Black Hole: And Other Cosmic Quandaries can give you a lot of buddies because by you taking a look at this one book you have issue that they don't and make anyone more like an interesting person. This specific book can be one of a step for you to get success. This reserve offer you information that maybe your friend doesn't recognize, by knowing more than different make you to be great individuals. So , why hesitate? We need to have Death by Black Hole: And Other Cosmic Quandaries.

Rocky Melvin:

Do you like reading a e-book? Confuse to looking for your preferred book? Or your book has been rare? Why so many question for the book? But virtually any people feel that they enjoy with regard to reading. Some people likes studying, not only science book and also novel and Death by Black Hole: And Other Cosmic Quandaries or even others sources were given knowledge for you. After you know how the truly amazing a book, you feel wish to read more and more. Science book was created for teacher or students especially. Those textbooks are helping them to put their knowledge. In various other case, beside science publication, any other book likes Death by Black Hole: And Other Cosmic Quandaries to make your spare time far more colorful. Many types of book like this one.
