Digital Signal and Image Processing using MATLAB, Volume 1: Fundamentals By Gérard Blanchet, Maurice Charbit

This fully revised and updated second edition presents the most important theoretical aspects of Image and Signal Processing (ISP) for both deterministic and random signals. The theory is supported by exercises and computer simulations relating to real applications.

More than 200 programs and functions are provided in the MATLAB® language, with useful comments and guidance, to enable numerical experiments to be carried out, thus allowing readers to develop a deeper understanding of both the theoretical and practical aspects of this subject.

This fully revised new edition updates :

- the introduction to MATLAB programs and functions as well as the Graphically displaying results for 2D displays
- Calibration fundamentals for Discrete Time Signals and Sampling in Deterministic signals
- image processing by modifying the contrast
- also added are examples and exercises.
