Living within Limits: Ecology, Economics, and Population Taboos By Garrett Hardin

"We fail to mandate economic sanity," writes Garrett Hardin, "because our brains are addled by...*compassion*." With such startling assertions, Hardin has cut a swathe through the field of ecology for decades, winning a reputation as a fearless and original thinker. A prominent biologist, ecological philosopher, and keen student of human population control, Hardin now offers the finest summation of his work to date, with an eloquent argument for accepting the limits of the earth's resources--and the hard choices we must make to live within them.

In *Living Within Limits*, Hardin focuses on the neglected problem of overpopulation, making a forceful case for dramatically changing the way we live in and manage our world. Our world itself, he writes, is in the dilemma of the lifeboat: it can only hold a certain number of people before it sinks--not everyone can be saved. The old idea of progress and limitless growth misses the point that the earth (and each part of it) has a limited *carrying capacity*; sentimentality should not cloud our ability to take necessary steps to limit population. But Hardin refutes the notion that goodwill and voluntary restraints will be enough. Instead, nations where population is growing must suffer the consequences alone. Too often, he writes, we operate on the faulty principle of shared costs matched with private profits. In Hardin's famous essay, "The Tragedy of the Commons," he showed how a village common pasture suffers from overgrazing because each villager puts as many cattle on it as possible--since the costs of grazing are shared by everyone, but the profits go to the individual. The metaphor applies to global ecology, he argues, making a powerful case for closed borders and an end to immigration from poor nations to rich ones. "The production of human beings is the result of very localized human actions; corrective action must be local....Globalizing the 'population problem' would only ensure that it would never be solved." Hardin does not shrink from the startling implications of his argument, as he criticizes the shipment of food to overpopulated regions and asserts that coercion in population control is inevitable. But he also proposes a free flow of information across boundaries, to allow each state to help itself.

"The time-honored practice of *pollute and move on* is no longer acceptable," Hardin tells us. We now fill the globe, and we have no where else to go. In this

powerful book, one of our leading ecological philosophers points out the hard choices we must make--and the solutions we have been afraid to consider.

Editorial Review

Review

"We have but one world; we should be careful with it. Anyone who agrees will love this book, whose every page is almost too full of important facts and wise arguments....Hardin has given us the altruistic 'warning call' of the prophet with a dangerous message--dangerous to give and dangerous to ignore. Somewhere he should get a genetic reward."--*EES Newsletter*

"A wide-ranging and eclectic presentation....It is also an excellent resource for those teaching high school and college students about human-ecosystem interactions. In truth, this is a helpful guide for all of us as we recognize the problem of overpopulation and start learning to live within the earth's limits. With Hardin's help, perhaps we can begin to envision a sustainable future for a stable population."--*Electronic Green Journal*

"*Living Within Limits* is a sophisticated attack on immigration that spans philosophical and sociological arguments."--*the Public Eye*

"Garrett Hardin is...a fearless and original thinker. *Living Within Limits* is very welcome. Hardin is tireless in his crusade to make us face up to ecological realities, especially our seeming inability to confront the most serious long-term problem, overpopulation."--*New Scientist*

"This is an outstanding volume on population issues - the most important issues facing humanity today."--
Payson Sheets, *University of Colorado*

From the Back Cover

In *Living Within Limits*, Hardin focuses on the neglected problem of overpopulation, making a forceful case for dramatically changing the way we live in and manage our world.

About the Author

Garrett Hardin is Professor Emeritus of Human Ecology at the University of California, Santa Barbara. He is the author of a number of books about ecology, biology, and ethics, including *Promethean Ethics*, *The Limits of Altruism*, *Stalking the Wild Taboo*, and *Population, Evolution, and Birth Control*.

Users Review

From reader reviews:

Lourdes Williams:

Within other case, little persons like to read book Living within Limits: Ecology, Economics, and Population Taboos. You can choose the best book if you'd prefer reading a book. Provided that we know about how is important a new book Living within Limits: Ecology, Economics, and Population Taboos. You can add information and of course you can around the world by way of a book. Absolutely right, since from book you can know everything! From your country till foreign or abroad you can be known. About simple issue until wonderful thing you are able to know that. In this era, we are able to open a book or perhaps searching by internet product. It is called e-book. You need to use it when you feel bored stiff to go to the library. Let's study.

Myrtle Hamer:

Hey guys, do you desires to finds a new book to see? May be the book with the headline Living within Limits: Ecology, Economics, and Population Taboos suitable to you? The book was written by well-known writer in this era. The book untitled Living within Limits: Ecology, Economics, and Population Taboos is the main of several books in which everyone read now. This particular book was inspired many men and women in the world. When you read this publication you will enter the new age that you ever know before.
