Biology Today and Tomorrow By Cecie Starr, Christine Evers, Lisa Starr

The Starr, Evers, Starr author team is the most successful in non-major biology primarily because of the team's clear and engaging writing style, trend-setting art, and unparalleled media. BIOLOGY TODAY AND TOMORROW WITH PHYSIOLOGY, Third Edition, the team's most concise text, provides the perfect balance between educating students on the most compelling issues that instructors desire to convey with the critical-thinking skills needed to become responsible citizens of the world.

Editorial Review

Review

1. Invitation to Biology. 2. Molecules of Life. 3. Cell Structure. 4. Cell Function. 5. Capturing and Releasing Energy. 6. DNA Structure and Function. 7. Gene Expression and Control. 8. How Cells Reproduce. 9. Observable Patterns of Inheritance. 10. Biotechnology. 11. Evidence of Evolution. 12. Processes of Evolution. 13. Early Life and the Microbes. 14. Plant Evolution. 15. Animal Evolution. 16. Population Ecology. 17. Ecosystems and Communities. 18. The Biosphere.

About the Author

For the past two decades, Cecie Starr has been known as one of the best-selling biology textbook authors. Her texts, appreciated for their clarity in both the written word and the visual representation of biological concepts, include multiple editions of BIOLOGY: THE UNITY AND DIVERSITY OF LIFE, BIOLOGY: CONCEPTS AND APPLICATIONS, and BIOLOGY TODAY AND TOMORROW. Her original dream was to become an architect. Instead of building houses, she now builds, with care and attention to detail, incredible texts based on this philosophy: "I invite students into a chapter through an intriguing story. Once inside, they get the great windows that biologists construct on the world of life. Biology is not just another house. It is a conceptual mansion. I hope to do it justice."

Christine Evers has been creating multimedia and Web-based materials to supplement Starr and other science texts for ten years. She earned her B.S. in Biology from SUNY Stony Brook. After working as a research assistant studying the developmental biology of slime mold, she was awarded an N.S.F. fellowship to attend Yale, where she studied evolutionary biology and honeybee behavior. She has a strong interest in science education and serves as a member of her local school board.

Lisa Starr earned her B.A. in Chemistry/Biochemistry from the University of California at San Diego Revelle College in 1982. Over the next five years, she became expert in molecular and cell biology as she helped build a veterinary virology research program at the startup biotech firm Syntro (which was later spun off into Protein Polymer Technologies). During this time, Lisa invented the cDNA cloning kit and the mRNA isolation kit that launched Invitrogen (now part of Life Technologies). She left Syntro to launch a molecular biology division for a veterinary vaccine company (Synbiotics, later acquired by Pfizer Animal Health), and then spent seven years at The Scripps Research Institute investigating integrin isoform expression in development and cancer metastasis and training postdoctoral candidates. She was recruited to start up the biotech firm Ixsys/Applied Molecular Evolution (later acquired by Lilly) and to establish proof-of-concept for combinatorial library construction as well as antibody randomization/humanization at the fledgling firm. Prior to joining the Starr franchise, she was recruited to start up Desmos, another biotech firm, that was later spun off into Cythera/Novocell/ViaCyte. Since 1997, Lisa has been responsible for the incredible art in the Starr biology textbooks, and began authoring the books in 2004.

Users Review

From reader reviews:

Mike Hodges:

What do you about book? It is not important to you? Or just adding material when you want something to

explain what your problem? How about your free time? Or are you busy particular person? If you don't have spare time to perform others business, it is give you a sense of feeling bored faster. And you have extra time? What did you do? All people has many questions above. They must answer that question since just their can do this. It said that about publication. Book is familiar in each person. Yes, it is correct. Because start from on pre-school until university need this kind of Biology Today and Tomorrow to read.

Elliot Weber:

Hey guys, do you wants to finds a new book to read? May be the book with the subject Biology Today and Tomorrow suitable to you? Often the book was written by famous writer in this era. The actual book untitled Biology Today and Tomorrow is the main of several books which everyone read now. This kind of book was inspired many men and women in the world. When you read this guide you will enter the new way of measuring that you ever know ahead of. The author explained their concept in the simple way, therefore all of people can easily to know the core of this e-book. This book will give you a lots of information about this world now. So you can see the represented of the world within this book.

Margaret Honig:

Reading a reserve can be one of a lot of pastime that everyone in the world really likes. Do you like reading book so. There are a lot of reasons why people like it. First reading a reserve will give you a lot of new details. When you read a guide you will get new information mainly because book is one of numerous ways to share the information as well as their idea. Second, looking at a book will make a person more imaginative. When you reading through a book especially hype book the author will bring you to definitely imagine the story how the character types do it anything. Third, you can share your knowledge to some others. When you read this Biology Today and Tomorrow, you may tells your family, friends in addition to soon about yours reserve. Your knowledge can inspire different ones, make them reading a reserve.

Kirk Qualls:

Your reading sixth sense will not betray you, why because this Biology Today and Tomorrow reserve written by well-known writer who knows well how to make book that may be understand by anyone who all read the book. Written throughout good manner for you, dripping every ideas and publishing skill only for eliminate your hunger then you still question Biology Today and Tomorrow as good book not simply by the cover but also by the content. This is one guide that can break don't ascertain book by its include, so do you still needing another sixth sense to pick this!? Oh come on your reading sixth sense already told you so why you have to listening to an additional sixth sense.
