The Chilling Stars: A Cosmic View of Climate Change By Henrik Svensmark

Scientists agree that the earth has become hotter over the last century. But on the causes, despite what looks to the public mind like a consensus, there are dissenting voices. Based on Henrik Svensmark's research at the Danish National Space Center, this book outlines a brilliant and daring new theory that has already provoked fresh thinking on global warming. As prize-winning science writer Nigel Calder and Svensmark himself explain, an interplay of the sun and cosmic rays - sub-atomic particles from exploded stars - seem to have more effect on the climate than man-made carbon dioxide. For anyone interested in the real science behind our climate, this book is a must-read.

Editorial Review

Review

'The new totem of the climate-change sceptics' The Times 'If you are concerned by the doomsday scenarios regarding runaway climate change, then this alternative view of why the climate is warming will be of great interest.' Good Book Guide

About the Author

Henrik Svensmark leads the Center for Sun-Climate Research at the Danish National Space Center. Nigel Calder is a former editor of the New Scientist, and an award-winning science writer. His Magic Universe (OUP, 2003) was shortlisted for the Aventis Prize in 2004.

Users Review

From reader reviews:

Lloyd Lake:

What do you think about book? It is just for students because they're still students or this for all people in the world, the actual best subject for that? Just simply you can be answered for that concern above. Every person has different personality and hobby for each and every other. Don't to be pushed someone or something that they don't desire do that. You must know how great and also important the book The Chilling Stars: A Cosmic View of Climate Change. All type of book would you see on many sources. You can look for the internet methods or other social media.

Ilene Bixler:

The reserve untitled The Chilling Stars: A Cosmic View of Climate Change is the book that recommended to you to learn. You can see the quality of the publication content that will be shown to an individual. The language that article author use to explained their ideas are easily to understand. The copy writer was did a lot of research when write the book, hence the information that they share for you is absolutely accurate. You also could possibly get the e-book of The Chilling Stars: A Cosmic View of Climate Change from the publisher to make you far more enjoy free time.

Hoyt Adkins:

Your reading 6th sense will not betray anyone, why because this The Chilling Stars: A Cosmic View of Climate Change book written by well-known writer who knows well how to make book that may be understand by anyone who all read the book. Written within good manner for you, dripping every ideas and creating skill only for eliminate your hunger then you still hesitation The Chilling Stars: A Cosmic View of Climate Change as good book not simply by the cover but also through the content. This is one guide that can break don't evaluate book by its deal with, so do you still needing a different sixth sense to pick this specific!? Oh come on your examining sixth sense already said so why you have to listening to yet another

sixth sense.

Roberta Anglin:

Is it a person who having spare time after that spend it whole day by watching television programs or just telling lies on the bed? Do you need something new? This The Chilling Stars: A Cosmic View of Climate Change can be the reply, oh how comes? A fresh book you know. You are so out of date, spending your free time by reading in this completely new era is common not a geek activity. So what these books have than the others?
