IMS: A New Model for Blending Applications (Informa Telecoms & Media)

By Mark Wuthnow, Jerry Shih, Matthew Stafford

IP Multimedia Subsystem (IMS) technology, which merges the Internet with interactive telecommunications, represents the here and now for today's packet-switched networks. Consequently, anyone working with or around these converging fields needs to possess a fundamental understanding of IMS and how this technology is poised to change the way new applications are designed and deployed.

IMS: A New Model for Blending Applications goes beyond most references in this field. Rather than offer the usual explanation of the standard itself, the authors address how IMS-based services might be deployed in an operator's network. Leveraging the inside knowledge gained from years of working at the forefront of IMS research, the authors delineate the application layers and the applications that can be implemented using an IMS network. For those unfamiliar with IMS, they provide an overview of its key components and the signaling standards used for the implementation of an end-to-end IMS service.

Significant concepts are conveyed through real-life vignettes that describe how end users might actually use interactive IMS applications in the course of their day. This approach mimics the way an operator's marketing organization might go about building a business case for IMS application deployment. While technical enough to meet the needs of engineers, this approach will greatly assist marketing, sales, and managerial professionals with gaining a basic understanding of IMS, as well as a sense of the numerous applications driving the field forward.

Editorial Review

About the Author

Mark Wuthnow is a part of AT&T's architecture and planning organization and brings over 20 years of telecommunications experience to this work. He started his career at AT&T Bell Laboratories where he led the systems engineering teams responsible for the first three development releases of the ISDN Primary Rate Interface (PRI) for the 5ESS® switch. He later joined Southwestern Bell Technology Resources Inc. (now AT&T Laboratories) where he has been working in the wireless arena for over 15 years now. Mark has held various positions and has contributed to the various wireless subsidiaries of AT&T throughout their multiple mergers (including Southwestern Bell Mobile Systems, Cingular Wireless, and AT&T Mobility). In addition, he holds 12 patents and is also a senior member of IEEE.

Jerry Shih is currently part of AT&T's architecture and planning organization. He has been in chair and vice-chair positions in international SDOs in the past, mostly related to messaging service development. He has been involved in OMA service enablers' development since 2003 and is currently active in OMA converged IP messaging and converged address book service enablers' development. Jerry Shih started his telecom career at AT&T Bell Laboratories (now Alcatel-Lucent Bell Laboratories) where he worked on digital PBX call processing software development. In his 20-plus years' telecom career, he has worked for AT&T Bell Laboratories, BellSouth, Southwestern Bell Mobile System, Cingular Wireless, and AT&T Mobility in different capacities. He has been part of the major telecom evolutions, from ISDN to Intelligent Network to IMS.

Matthew Stafford began his telecommunications career in 1996 with SBC Technology Resources Inc. He worked on ATM and Quality of Service in IP networks. Matthew later moved to Cingular Wireless and then to AT&T as a result of its merger with Cingular Wireless. After working on various softswitch projects, Matthew wrote *Signaling and Switching for Packet Telephony* (Artech House, 2004). From 2004 to 2007, he served as vice chair of numbering for GSM North America. The numbering group's main task was to develop ENUM recommendations. Matthew is currently a member of AT&T's architecture and planning organization. Matthew is a member of IEEE.

Bill Rosenberg (Chapter 9 author) is a principal technical architect in AT&T's architecture and planning organization. He has over 20 years of experience in terrestrial and satellite communications. Bill's career began at TRW Space & Electronics (now Northrop Grumman Space Technology) where he was a systems engineer on satellite communication payloads. He later worked for Arrowsmith Technologies designing wireless communication systems for the company's fleet management product. Bill joined Southwestern Bell Technology Resources (now AT&T Labs) and continued with SBC's wireless division through its various incarnations, including Cingular Wireless and AT&T Mobility. Bill is supporting AT&T's wireless business by developing new technologies and services. He currently develops new messaging, cell broadcast, and IMS services for GSM and UMTS designs, and contributes to industry standards. Bill played a key role in the development and launch of Video Share, which was AT&T Mobility's first IMS-based service.

Users Review

From reader reviews:

Eunice Bosse:

What do you regarding book? It is not important to you? Or just adding material when you really need something to explain what the ones you have problem? How about your time? Or are you busy man? If you don't have spare time to do others business, it is gives you the sense of being bored faster. And you have extra time? What did you do? Everybody has many questions above. They must answer that question since just their can do that will. It said that about reserve. Book is familiar in each person. Yes, it is right. Because start from on jardín de infancia until university need that IMS: A New Model for Blending Applications (Informa Telecoms & Media) to read.

Mary McDonald:

Nowadays reading books are more than want or need but also get a life style. This reading behavior give you lot of advantages. Advantages you got of course the knowledge your information inside the book this improve your knowledge and information. The information you get based on what kind of guide you read, if you want send more knowledge just go with education books but if you want sense happy read one along with theme for entertaining including comic or novel. Often the IMS: A New Model for Blending Applications (Informa Telecoms & Media) is kind of reserve which is giving the reader erratic experience.

Jeffrey Diaz:

Hey guys, do you wishes to finds a new book to read? May be the book with the name IMS: A New Model for Blending Applications (Informa Telecoms & Media) suitable to you? Often the book was written by well-known writer in this era. The book untitled IMS: A New Model for Blending Applications (Informa Telecoms & Media)is the main one of several books this everyone read now. This kind of book was inspired lots of people in the world. When you read this publication you will enter the new dimension that you ever know just before. The author explained their idea in the simple way, so all of people can easily to understand the core of this reserve. This book will give you a lot of information about this world now. In order to see the represented of the world within this book.

Vikki Maynard:

Often the book IMS: A New Model for Blending Applications (Informa Telecoms & Media) has a lot of information on it. So when you check out this book you can get a lot of gain. The book was compiled by the very famous author. This articles author makes some research previous to write this book. That book very easy to read you can find the point easily after perusing this book.
